DETAILED ACTION

Specification

1. The disclosure is objected to under 37 CFR 1.71, for not clearly describing the invention. For example, the last paragraph in page 11 describes the pinion (P2) meshing with the pinion (P4) (line 26), and the pinion (P7) meshing with the pinion (P4) (line 38). However, Figs. 4 and 5 show the pinion (P2) and the pinion (P7) being spaced apart from the pinion (P4). Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art. Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There are many pinions in the format selector device. It is very confusing for one skilled in the art to connect all the pinions together in the claims.

The language of claim 1 is confusing. For example, the phrase "position of the format selector device allowing emergence of the cutting blade from the drum at each revolution of the drum for a small format and every two revolutions of the drum for a

large format” is confusing. It appears that the interaction of the pinions causes emergence of the cutting blade from the drum but not placing the format selector device in particular location causes emergence of the cutting blade from the drum.

Or the phrase “the selector device is positioned, from a lateral flange of the housing, on an outside and on an inside of the housing” is confusing. It is unclear how the selector can be located both inside and outside of the flange. And there is insufficient antecedent basis for the term “the selector device” in the claim.

Above are some examples. The Applicant is requested to review all the claims and make appropriate corrections.

Comment

4. It is noted that claims 1-11 have not been rejected over prior art. It appears that claim 1 overcomes cited prior art. However, in view of issues under 37 CFR 1.71 and 35 USC 112, 2nd paragraph, the allowability of claim 1 cannot be commented on at this time.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
